

Quiz Game Using Shell Script

1. Title Page

Project Title:

Quiz Game Using Shell Script

Submitted By:

Jatin Sankhla

BCA B1 4th Sem

Submitted To:

Ashish Rai Sir

Session: 2025–2026

2. Certificate

This is to certify that *Jatin Sankhla* has successfully completed the mini project titled “**Quiz Game Using Shell Script**” in partial fulfillment of the requirements for the degree of BCA (4th Semester).

HOD Signature

3. Acknowledgement

I would like to express my sincere gratitude to my faculty and college for giving me the opportunity to work on this project. This project helped me understand shell scripting concepts practically. I also thank my friends and online resources for their support.

5. Introduction

Shell scripting is a powerful way to automate tasks in a Linux environment. This project is a simple **Quiz Game** developed using Bash scripting. It allows users to answer multiple-choice questions and get instant feedback along with a final score.

6. Objective

- To understand basics of shell scripting
 - To create an interactive command-line program
 - To implement conditional statements and user input handling
 - To develop a simple quiz system
-

7. System Requirements

Hardware:

- Computer/Laptop
- Minimum 4GB RAM

Software:

- Linux OS / Ubuntu / Terminal
 - Bash Shell
-

8. Tools & Technologies Used

- Bash Shell
 - Linux Terminal
 - Text Editor (Nano / Vim / VS Code)
-

9. Methodology / Algorithm

1. Start the program
2. Initialize score = 0
3. Display question with options

4. Take user input
 5. Check answer using if condition
 6. Increase score if correct
 7. Repeat for all questions
 8. Display final score
 9. End program
-

10. Implementation (Code)

```
#!/bin/bash
```

```
score=0
```

```
echo "Welcome to Quiz Game"
```

```
echo "Q1. What is the capital of India?"
```

```
echo "a) Mumbai"
```

```
echo "b) Delhi"
```

```
echo "c) Kolkata"
```

```
read ans1
```

```
if [ "$ans1" == "b" ]; then
```

```
    echo "Correct"
```

```
    score=$((score+1))
```

```
else
```

```
    echo "Wrong"
```

```
fi
```

```
echo "Q2. Which command lists files?"
```

```
echo "a) ls"
```

```
echo "b) cd"
```

```
echo "c) mkdir"
```

```
read ans2
```

```
if [ "$ans2" == "a" ]; then
```

```
    echo "Correct"
```

```
    score=$((score+1))
```

```
else
```

```
    echo "Wrong"
```

```
fi
```

```
echo "Final Score: $score"
```

11. Output Screens

 (Take screenshots while running your script and paste here in Word)

Example:

Welcome to Quiz Game

Q1...

Correct

Final Score: 2

12. Advantages

- Easy to develop
 - Runs on any Linux system
 - Helps learn scripting basics
 - Interactive and user-friendly
-

13. Limitations

- Limited GUI (only terminal-based)
 - Not suitable for large-scale quizzes
 - Manual question handling
-

14. Conclusion

This project demonstrates the use of shell scripting for building an interactive quiz application. It helped in understanding basic programming logic, user input handling, and conditional statements.
